Technical Artist | Animator | Pipeline Developer
18 years of experience in 2D animation for different mediums, including games. Specializing in automation, scripting, and optimizing pipelines for increased efficiency in animation production. Proven impact on projects for **Netflix, Final Fantasy,** and more.

SKILLS & TECHNICAL EXPERTISE

- **Software:** Adobe Animate, Adobe Photoshop, Adobe After Effects, Clip Studio Paint
- **Scripting Languages:** Actionscript 2/3, JSFL, Extendscript, Expressions, Python 3, Qt Script (Toon Boom Storyboard Pro and Harmony), Google Apps Script, Google Sheets Formulas, ftrack API
- **Pipeline Optimization:** Automation, import/export scripting, asset management, workflow tools
- **Game Development:** 2D game assets, creature/effects animation, tool integration, Flash games

---

PROFESSIONAL EXPERIENCE

Powerhouse Animation Studios, Inc

Lead Technical Artist | May 2014 – April 2025

Projects: Netflix's *Castlevania*, *Masters of the Universe: Revelation*, *Blood of Zeus*, *Tomb Raider*, *Final Fantasy XV: A King's Tale*, *Dead Island: Retro Revenge*, Stoic's *The Banner Saga*, and more

- **Animation:** Animated, roughed, and in-betweened in traditional, puppet, 8-bit, graphic, and motion comic styles for characters and effects.
- **Pipeline Automation:** After working in various parts of the pipeline and finding repetitive tasks, I took it upon myself to single-handedly revolutionize the pipeline with scripts, saving countless hours of manual labor and greatly increasing consistency throughout the production process. This includes the following examples (scripts I created without prompting are indicated with a *):
    - ***Keylighting Automation:** Developed an After Effects script that retrieves preset character compositions from a database and applies them automatically based on the current scene and character. Enabled bulk saving of new, location-specific character compositions to the database. Eliminated manual searching and setup, significantly reducing artist workload.
    - ***Lighting Pass System:** Assigned to color final art in Toon Boom Harmony, a task requiring coloring baked tone colors on each frame. Finding this process tedious, created code to export separate light/shadow image sequences from Toon Boom Harmony and automate color application in After Effects, importing with proper timing. Enabled dynamic lighting adjustments without requiring re-coloring of frames, improving flexibility and efficiency.

- ***Chain Animation Tool:** Assigned to draw final art for chain animations. Built a tool using JSFL in Adobe Animate to automate chain link placement along a path, with controls for scaling and twisting. Streamlined a tedious manual process for *Castlevania* scenes.
- **Import/Export Solutions:** Built import/export scripts for exporting storyboards, including camera movements, from Toon Boom Storyboard Pro to Photoshop and Clip Studio Paint. Enabled cross-software workflows with render farm network capabilities.
- **Google Sheet:** Scripted task-tracking tools with Google Apps Script and Google Sheets Formulas, enabling managers to monitor deadlines and tasks across departments.

Team Chaos LLC

Freelance Animator | Dec 2012 – Oct 2013

Projects: *Dragon Academy* (iOS), *Elements: Broken Lands* (iOS)

- Animated characters and effects using traditional and puppet techniques in Adobe Animate.
- Automated repetitive asset creation tasks with JSFL scripts to enhance production efficiency.

Zynga

Senior Artist | Oct 2010 – Oct 2012

Projects: *Kingdoms and Quests*, *The Ville* (Facebook games)

- Produced animations for characters, creatures, and effects, collaborating closely with programmers to integrate assets.
- Created an AIR-based tool that automated sprite sheet exports, reducing manual tasks for the team and accelerating asset delivery.

Powerhouse Animation Studios, Inc

Lead Flash Developer | Aug 2006 – Sep 2010

Projects: *Sony Freerealms, Penny Arcade Adventures: On the Rain-Slick Precipice of Darkness, and more*

- Pioneered a programming department, creating custom games and tools using Actionscript 2 and 3.
- Managed a team of programmers, developing games such as tower defense, side-scrollers, physics-based simulations, and puzzle games.

EDUCATION

- **Savannah College of Art and Design (SCAD)** – B.F.A., Animation (2003 – 2006)
- **Austin Community College** – Design and Visual Communications (2002 – 2003)
- **University of Texas at Austin** – Computer Science (1999 – 2001)
